

Master thesis project available:

Seasonal effects in the Przewalski's horse gut microbiome

Photo: Germán Orizaola

Tasks include: Analyse microbiome DNA sequence data, interpret results, reading scientific papers, and write a thesis about the findings. The results will be published in a scientific journal.

Requirements: An interest in learning about wildlife microbiomes and coding in R.

Duration: 20-30 weeks (30-45 hp).

Start: Flexible, June or Autumn 2024.
