

Course within the Swedish program for PhD courses in human geography

Time-geography – theoretical approach, notation system and methods (7,5 credits)

Aim

Time-geography is of the most internationally recognized contributions of Swedish human geography during the last 50 years. There are time-geographically inspired researchers around the world and the interest in time-geography has grown during the last decades. The time-geographic approach, with its methods and special notation system is applied in many different problem areas, like studies of individuals' and households' everyday life, division of labor in households, activity patterns at individual and aggregate levels, health and disabilities, teaching/education, migration nationally and internationally, transportation systems, policy formation, energy use in buildings and transportation, communication (including ICT), urban and regional accessibility, resource use and environmental effects of human activities and work organization in industry and services.

The aim of the course is to make the PhD candidates familiar with the time-geographical approach, its development, concepts and methods, and to give examples of how the approach has been used within various areas of application and in different disciplines. During the course the PhD candidates will have opportunities to explore and use time-geography in relation to their work on their thesis.

Goal for PhD candidates learning

After the course, the PhD candidates will be well oriented in time-geographical concepts and methods. They will have ability to reason time-geographically and use time-geographic tools in issues of interest for them.

Examination

The individual examination is based on a text that each PhD candidate writes and wherein a problem area of interest for the candidate is discussed and analyzed with time-geographical concepts and methods. We encourage the candidates to relate the examination task to the subject of their thesis.

The PhD candidates are expected to attend the seminars arranged during the course.

Course evaluation

A continuous course evaluation is performed (orally) and a written evaluation is performed after the course.

Location of the course in the time-space

The course will be offered during the *autumn 2024* and is divided into two parts of three full days:

- *Part 1*: 4-6 September
- *Part 2*: 11-13 November

Both parts will be located in Gothenburg, Sweden. The course is planned as an on-site course. International guest lecturers will be invited to participate online.

Homework is expected from the PhD candidates between the two parts of the course (reading, an exercise, and the examination task). The teachers responsible for the course will have continuous contact with the PhD candidates in the meantime. There will be lectures and seminars, and the PhD candidates will have good opportunities to discuss with invited guests and the teachers responsible for the course. The examination task will be distributed during the first part of the course.

Teachers responsible for the course

Eva Thulin, Professor, Department of Economy and Society, Gothenburg University (contact person)

Kajsa Ellegård, Professor, Department of Thematic Studies, Technology and social change, Linköping University

Åsa Westermark, PhD, Human geography, Jönköping University

Guests

Guests doing research in human geography and other disciplines will contribute with lectures during the course.

Participants

Time-geography is interdisciplinary in its constitution and the approach is applied in several subjects. We welcome PhD candidates from various disciplines to attend the course. The number of participants is *limited to 20 doctoral students*.

Application

Deadline for applications: **June 15, 2024**

Send application to: Eva Thulin (eva.thulin@geography.gu.se). The application should include: name and contact information, number of years in PhD Program, name of supervisor(s), short description of thesis topic.
