2000

THUNBERGIA is the continuation of "Publications from the Herbarium, University of Uppsala", of which 19 numbers were issued between 1978 and 1986. The name is given in memory of Carl Peter Thunberg (1743–1828), a disciple of Linnaeus and a famous traveller to South Africa and Japan. His collections, about twentyseven thousand sheets, were transferred to Uppsala University in 1785, and became the foundation of the Botanical Museum. Thunberg succeeded Linnaeus filius as professor in 1785 and held the professorship to his death.

Thunbergia is issued irregularly and distributed on exchange basis or by order to the address below. From no 28 each issue is available on <http://www-hotel.uu.se/evolmuseum/fytotek> under Publications.

Contributions are refereed by external specialists.

The combination *Microsphaera berberidis* is generally ascribed to Léveillé (op. cit. 381). In fact, however, he there introduced the generic name *Microsphaera* to replace the illegitimate *Calocladia* Lév., non Grev., but he failed to publish the appurtenant combinations. I leave it an open question when, where and by whom it was done. – L.H. – The same species, on *Mahonia aquifolium*, is distributed as no. 3639.
